ABOUT ME

I find coding one of the most fascinating skills anyone could have. I taught myself how to code relying only on online resources. I managed to work on my personal projects by applying the skills that I learned from the aforementioned resources. I chose web development as my path in software development because of the opportunities that are available at my disposal such as mobile applications development and front-end web development. I am eager to continuously learn as much as I can to improve my skills and sharpen my knowledge about the rapidly changing technologies with the hopes of becoming a full-stack developer.

SKILLS

Front-End

HTML

CSS

Javascript ES6 / jQuery

Responsive Web Design

Frameworks & Libraries

Bootstrap

Materialize CSS

WordPress

Theme Development and
Customization (PHP)

Version Control

Git

Github

SAUD AL-ALAWI

FRONT-END WEB DEVELOPER

PROJECTS

→ DevDevil Electronics Blog (Personal Blog)

A personal blog created with a Wordpress theme developed from scratch. The customizability nature of WordPress was utilized to create different custom widgets for the side navigation as well as custom post types and custom settings for the admin dashboard. Along with WordPress, the website was developed with HTML, CSS, and Javascript.

→ Travel Agency Website

A website created for travel agencies to showcase their available packages as well as the famous attractions. It was created at first as static website with HTML, Javascript, and Materialize CSS framework as well as CSS. The website was developed further as a highly customizable WordPress theme, allowing the admin to add new content (packages and attractions) easily.

[Code Link \(WordPress\)](#)

→ Portfolio Website

A single-page website created to showcase the projects that I worked on. It was developed with HTML, CSS and Materialize CSS. Javascript was applied as well with the help of jQuery to navigate through the different sections of the website.
